

ACKNOWLEDGEMENTS

The authors wish to acknowledge many individuals whose help and cooperation aided in the completion of this study and final report.

Special thanks to Robert H. Estabrook for his complete support of this special study and his editorial assistance on the report. Thanks also to Stephanie Bowser for her editorial assistance, and to Dee Smith for taking on the co-coordinator role for one summer.

Special acknowledgment to Kendall Perkins who was the initial study coordinator for laying the groundwork and setting up the study stations. It is a disappointment that he did not have the opportunity to complete what he began.

The Biology Bureau Staff of the Department of Environmental Services is acknowledged for its professional assistance in the field and laboratory. Particular thanks go to Kendall Perkins, Dee Smith, Walter Henderson, Kenneth Warren, Steve Landry, Stephanie Bowser, Allison McLaughlin, and Matthew Bowser who spent many hours under adverse weather conditions recording stream flows, sampling the lake, measuring groundwater seepage, and conducting many of the laboratory analyses required for this study.

The efforts of Gary Haworth and the staff of the DES Laboratory are greatly appreciated in coordinating and processing the chemical analyses for the study.

The authors are appreciative of the work by George Hastings, Katie Bramley, and Herb Bergquist in preparing various land use maps using GIS technology.

Members of the Citizen Advisory Committee (CAC) are thanked for their participation in the study, and for their concern and dedication in the protection of Great Pond. Special thanks also to Diane Eadie of the Kingston Conservation Commission for her knowledge and insight on the issues within the Great Pond watershed. Special thanks to Kingston Road Agent Rich St. Hilaire for his assistance in alleviating problems with beaver dams at various tributaries.

Additional thanks go to Jim Lane and the personnel at Great Pond State Park for providing access to the park and at times sample courier services. The lake front property owners on Great Pond and the staff of Camp Lincoln are also acknowledged for allowing us to install seepage meters in front of their homes, and/or providing access to their property to sample tributaries or resident wells.

Sincere thanks to the many monitors from the Great Pond CAC and other volunteers enlisted by them who spent many weekend hours under adverse weather conditions, recording stream flows and conducting watershed surveys. Because of their efforts, we were able to compile a very comprehensive database and detailed nutrient/hydrologic budget for the study period.

Additional thanks go to Dave Ingalls for providing flight services to conduct an aerial survey of the land use within the Great Pond watershed.

We are grateful to Region I of the United States Environmental Protection Agency for their financial assistance, and particularly Warren K. Howard for his support and guidance during all phases of this project.

A very appreciative thanks to Judy Reid for her patience, professionalism and sense of humor during the many hours of typing portions of this document.

GREAT POND VOLUNTEER MONITORS

Rich Ahlberg	Walter Clark	Jim Lane
Bruce Anderson	Joe Gagne	Carl Opperheimer
Mary Bishop	Roland Hanson	Liz Rankin
Tom Bishop	Stan Hicks	Larry Smith
Paul Blais	Dave Ingalls	Charles Thomas
Heidi Blais	Ernie Landry	Greg Thompson
Ken Briggs
